

CLEAN VERSION OF AMENDED SPECIFICATION AND CLAIMS

IN THE SPECIFICATION:

Please add on page 5, between lines 15 and 16 the following:

B1 ✓ Fig. 3 is a front elevation view of a body fat measuring apparatus with a built-in weight meter according to another embodiment of the present invention.

The third full paragraph on page 9 now reads as follows:

B2 ✓ In an alternative embodiment of the present invention shown in Fig. 3, the inner board 3 may be omitted and the load sensor units 2 may directly be mounted to the transparent outer board 4 to form a single-layered configuration. According to such configuration the inner construction of the apparatus is visible through the transparent outer board from the outside without any necessity of disassembling the apparatus. Therefore, any breakage of lead wires or other defects can readily be found without disassembly of the apparatus.

IN THE CLAIMS:

Claims 12, 16 and 17 now reads as follows:

4 12. A living body measuring apparatus with a built-in weight meter, comprising:

B3 a measuring platform;

a plurality of electrodes; and

a load sensor unit,

wherein said measuring platform is formed from a transparent outer board in a single-layered configuration, said electrodes being arranged on said measuring platform to measure a living body impedance, said load sensor unit being mounted on said measuring platform,
